

M.E.L.T.

Medical Energies for Lipo and Tightening

The only equipment in the UK to combine 5 techniques in one:

Ultrasonic waves

They can effectively break down the fat, using a focus strong ultrasonic head to release 40,000Hz ultrasonic waves, producing countless vacuum air pockets in and out of fat cells.

Ultrasonic Lipodissolve Equipment, through high energy deep-level transport, takes 1100nm-1500nm high ultrasonic head to shoot out violent energy into fatty layers, producing cavitation in fat cells, forming countless tiny vacuum oxygen bubbles by means of pressure to destroy fat cell's membrane, breaking them down and then eliminating them out of the body through the lymphatic system.

Under pressure, the destroyed fat will be taken by the lymph, then disorganized by the ferment, changed to be dissociative fatty acid, eliminated in normal activity, then out of the body.

- Radio Frequency : increases the fat dissolving process and promotes the body's metabolism through high effect RF energy

- Photon Therapy : (Blue and Red lights) to improve the skin quality. Applicable range: full body shaping, cellulite, dissolving of fat, skin tightening, lymphatic drainage, enhancing skin elasticity.

No need for operation or anesthetic: 100% painless

it will not produce an irregular surface,

No bleeding, no bruises,

No side effects, no damage to the blood vessels, nerves or tissues,

No wounds, no down time,

Suitable for all skin types.

CE approved
