

S3 STIMULATED SELF SERUM aka DRACULA THERAPY

"The therapeutic use of one's own platelet rich plasma constitutes a relatively new biotechnology that has been a breakthrough in the stimulation and acceleration of soft tissue and bone healing. The efficiency of this process lies in the local and continuous delivery of a wide range of Growth Factors and proteins, mimicking the needs of physiological wound healing and reparative tissue processes.,The benefit for the skin... has been substantiated by many clinical studies.."

Dr C. Accardo

Stimulated Self Serum skin therapy

Dr Daniel Sister brings a new and natural way to improve your skin. S3 Therapy (Stimulated Self serum therapy) helps with improving wrinkles, healing of scars and any other cutaneous damage, active hydration of the skin, increased brightness and radiance, it stimulates the skin helping to increase cellular growth and visco-elastic regeneration. This technique is used when it is necessary to improve the skin profile: the face, neck, décolletè, arms and hands, the inner thighs and early hair loss. Originally invented by a dentist to treat receding gums, Dr Sister's approach concentrates on the skin areas.

Blood is taken from the patient's arm and then immediately centrifugated for five minutes to promote stimulation of cellular growth. The blood is then separated in the serum from the red cells, immediately stimulated with amino acids (DNA) and on the spot is reinjected into the face, hand or whichever area of the skin is being treated. Most of the signs of cutaneous aging are tied up to external factors that damage the heart of the cells: the DNA. As years go by, the natural ability of the DNA to self-mend decreases and the cellular damages accumulate. This is the cause at the base of the cutaneous aging.

Nucleotides are the key components for the reproduction, the growth and the functions of all cells. S3 Therapy has the purpose to regenerate the skin thanks to a Meso technique that utilises the patient's own bio-active serum, platelet, leukocytes, and the DNA nucleosides, with the aim of regenerating aged and damaged skin as well as hypodermal tissues. S3 Therapy is associated with DNA nucleotides to realize a synergy of unbelievable effectiveness. The fraction of nucleotides of the DNA obtained by synthesis, have the synergic role to realize a great and more intense platelets and leucocitis activation. This product is indicated to obtain a bio-revitalization with more tonic, flexible, and hydrated skin that may persist over time by conducting a session every 4-6 months.

One session of S3 Therapy is needed every 4-6 months.
